Benefits of Active Travel

Feel fit!
Walking & cycling are great ways to get fit. Tax your thighs instead of your tyres!

Relax!
Being active is proven to reduce stress and anxiety. No need to worry about traffic jams and get there on time.

Savings!
Spend your money on you instead of your car. With rising fuel prices & parking rates it makes sense to think of travelling actively.

Good role model!
If you walk to the shops or walk some of the school journey with your child, there is a greater likelihood they will become active too. Instead of focusing on traffic, you have a great opportunity to spend some time with your child.

A healthier environment!
Walking & cycling leads to less cars on the road meaning safer surroundings, cleaner air and less noise for you & your family.

What is Active Travel?

Active Travel is using walking or cycling to make everyday journeys to work, to school or the shops. Active Travel is an easy and accessible way for people to build physical activity into their daily life.

Regular physical activity is a great way to help you feel and look good!

Being active can lower your risk of heart disease, stroke, cancer, diabetes, osteoporosis and depression. Getting children active also reduces their risk of ill health as an adult.

Getting started!

If you are not already active it is important to build up gradually so start with bouts of 10 minutes. Even a little will make a difference!

Choice
Choose the mode of active travel that you feel most confident with. Walking is the easiest way for everyone to get active.

Be realistic
If you can’t walk all the way to work/school perhaps walk as far as the bus stop. It all counts towards your 30 minutes a day.

Be prepared
Make sure you have the right equipment—rain gear, comfortable footwear, arm reflectors, cycling helmet, etc...

Safety
Become familiar with your route and know if it has good lighting, footpaths or cycle lanes.

How much is enough to improve health?

Adults need at least 30 minutes of moderate intensity activity on 5 days a week.

Children need at least 60 minutes of moderate to vigorous intensity activity every day.

If you have a medical condition and are concerned about getting active, speak to your GP.
